

Sollutium

Complex web solutions, API design for mobile apps.
.NET, ASP.NET MVC, WCF, NodeJS, AngularJS

What we do

We develop business apps

1. Web-applications for business, API
2. Architecture of business applications
3. E-Library systems
4. Document flow systems, CRM, ERP

We consult

1. Optimization of architecture of business apps(PoC, Demo)
2. Optimization of the IT-infrastructure
3. Consulting for implementing the system of corporate search Sphinx

Technologies and languages we use

1. .NET: C#, MVC, EntityFramework, WCF, Razor
2. JavaScript: plain Javascript, AngularJS, NodeJS, jQuery
3. Databases: MS SQL Server, My SQL
4. HTML, CSS, Twitter Bootstrap
5. Search: Sphinx

Our team

We are team of 8 guys: 1 tech lead, 1 team lead, 3 .net developers, 1 javascript developer, 2 testers, 1 PM

Some of our projects

1. DVS – On-line library with full text search and secure documents view
2. VH – web application for monitoring of patients condition by physicians and their interaction
3. SDViewer – embedded component of secure online document view. Allows to view the document to which you have access without leaving the browser. Embedded on the customers' site and supports protection of documents from unauthorized downloading
4. Sphinx search – solution for indexing and full text search in storage with more than 20Tb of documents
